

uMarklite Watermarking Program

This is a simple guide to downloading and installing the uMarkLite watermarking program. I used this program extensively before deciding to save time and purchasing the full program which only costs about NZ\$30.

Pros:

- ❖ You can choose text or images to use as copyright and watermark your photos.
- ❖ Your choice of fonts, and as long as you have it on your computer it can use it.
- ❖ Set the size of watermark
- ❖ Set the position, and you can even play with diagonals, etc, although that may be disabled on the free version (I have forgotten)
- ❖ Really fast – 50 images in a matter of seconds
- ❖ Future proofed, in that it uses new technology not old.

Cons:

- ❖ The free version has some limitations,
- ❖ It only watermarks 50 photos at a time
- ❖ Adds a very small uMarkLite logo at the bottom left of all the photos
- ❖ Special symbols are not supported in the free version so you need to copy and paste copyright © symbols or trade mark™ symbols or other registered® trademarks. Not a problem, just takes a bit longer
- ❖ You need Windows2000, XP, Vista or a system that can run version 1.1 of Dot.NET on your computer. This applies to both the free and paid versions.
- ❖ If you do not wish to load Dot.Net onto your system then disregard this program. If you have no idea what I am talking about, that's ok. I can assure you that a number of the Findapic photographers have now installed it without any other issues that I am aware of.
- ❖ You probably need broadband to download the Microsoft files, or a lot of patience on dialup (takes about at least an hour), as the Microsoft file is about 23mb

If you buy the full version and need to regularly watermark photos in large numbers, then the \$30 is probably well worth it.

Want to get started?

Then go to the next page and follow the instructions.

Start by visiting here <http://www.uconomix.com/Products/uMark/Default.aspx> and having a read about all it can do.

Want to get the FREE version (or paid) then go to the [Downloads](#) page.

When you arrive there you will need to download 2 things:

- ❖ First choose the program you want from the left hand menu e.g. uMark Lite 1.1' and click it.
- ❖ Now if nothing happens, or no download starts, click this next link and find the download uMark Lite button and click it
([http://www.freedomdownloadcenter.com/Multimedia and Graphics/Misc Graphics Tools/uMark Lite.html](http://www.freedomdownloadcenter.com/Multimedia_and_Graphics/Misc_Graphics_Tools/uMark_Lite.html)) One of these places will work.

Don't choose run, choose Save and save to your downloads folder, your Findapic software folder (or anywhere that you will remember!).

Now you also need to go to this following page and do a big download.

<http://www.microsoft.com/downloads/details.aspx?FamilyId=262D25E3-F589-4842-8157-034D1E7CF3A3&displaylang=en>

The link below should take you straight there else go back to the [uMark Forum](#) page and find the link to Microsoft .Net Framework there

Where it says in red **Microsoft .Net Framework 1.1** ([Download if you don't have](#)) click the download if you don't have link. It may even work from the email.

WARNING !!!!!!!!!!! (DO NOT download any other versions because you thing they may be newer, as that's not how these things work!)

Once you have downloaded both files, and MADE sure the Microsoft one is finished too, you can run the uMarkLite.exe file and follow the instructions.

How to Work uMark

There are excellent video instructions which you can view or even save to your computer that take you through the various options here

<http://www.uconomix.com/Products/uMark/Videos.aspx> or if you don't want to do that use the screenshots here to work it all out

<http://www.uconomix.com/Products/uMark/Screenshots.aspx> Click the photos for a large shot.
